

REAL ESTATE PORTAL

Discover · manage · deploy

Made with GAMMA

01 / CUSTOMER JOURNEY

One place to discover and manage property

- Browse a live catalog of homes, apartments, villas, and farm houses across Indian cities
- Move from search to property details in a simple, responsive flow
- Designed as a ready-to-use project with a clear customer journey

Made with GAMMA

02 / PROPERTY MANAGEMENT

Property management works end to end

Every listing has a clear lifecycle, from the first record to its removal.

01

Read · GET

Fetch and display property listings and detailed records.

02

Create · POST

Add a new property through a structured form.

03

Update · PUT

Edit listing information when details change.

04

Delete · DELETE

Remove listings through card-level actions.

Made with GAMMA

03 / TRUST LAYER

Authentication protects the experience

> The account flow keeps sensitive actions behind a signed-in experience.

01

Account flow

Signup, login, and logout create a complete account flow.

02

Session memory

LocalStorage keeps the signed-in session available across the app.

03

Protected routes

Adding and editing properties is restricted to authenticated users.

Made with GAMMA

04 / DISCOVERY TO WISHLIST

Search faster. Save what matters.

A focused search surface turns a large catalog into a manageable shortlist.

SEARCH

Find the right title

Search by property title.

FILTER

Reduce the field

Narrow results by type, purpose, and price range.

SORT

Choose a direction

Sort listings from high to low or low to high.

WISHLIST

Add what matters

Add favorites to a Redux Toolkit wishlist and remove them anytime.

Persistence: Wishlist data persists with LocalStorage, preventing duplicate saves.

Made with GAMMA

05 / PRODUCT ARCHITECTURE

Built as a connected, deployable product

Each layer has a clear job, and the pieces connect through a live API.

FRONTEND

React + Vite

React Router, reusable components, and Axios.

STATE

Redux Toolkit

Powers the global wishlist experience.

BACKEND

JSON Server

Exposes users and properties through a live API.

DELIVERY

Deploy separately

Connect the backend and frontend through the Axios base URL.
